

RailOpt[®] *WEB*

**Interface between personnel
and planning unit**

RailOpt® WEB facilitates communication between personnel and planning unit.

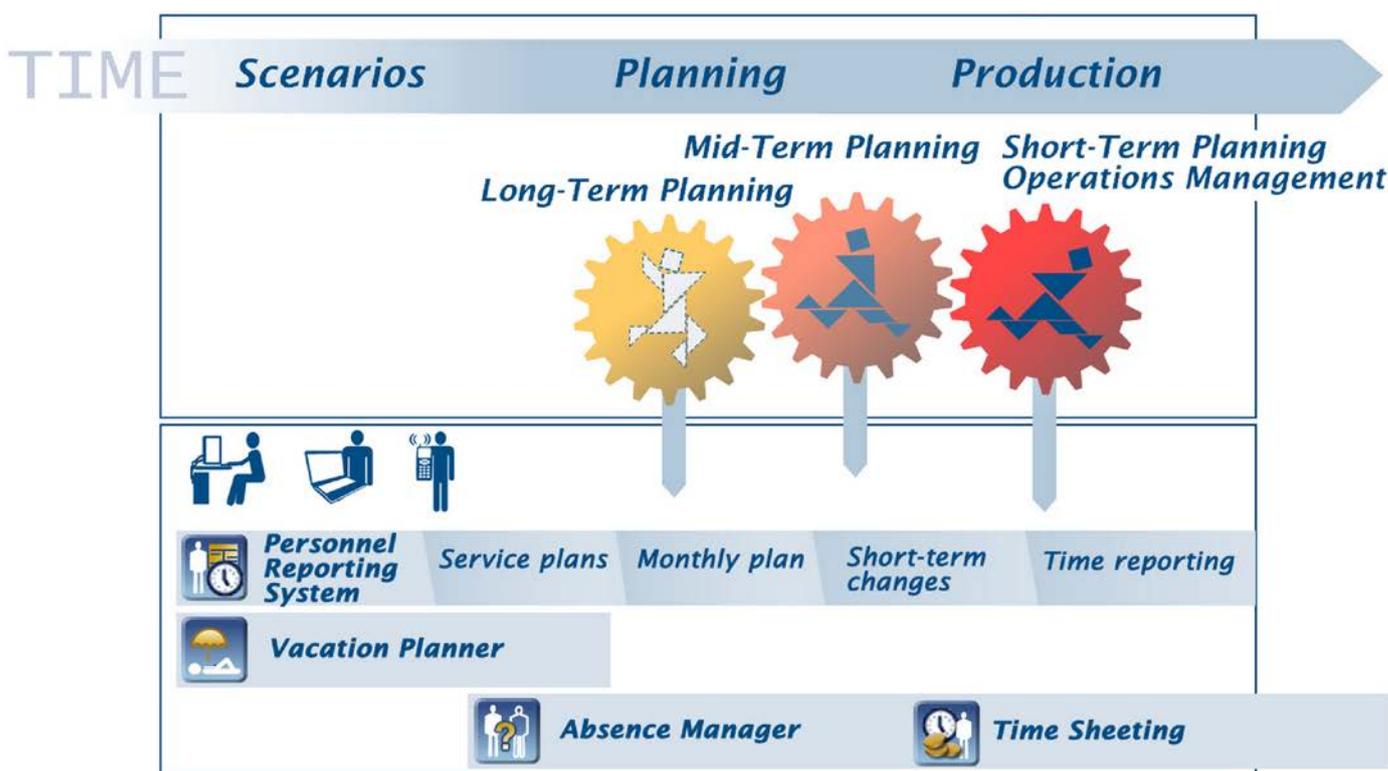

In addition to the railway-specific RailOpt® for planners and dispatchers Qnamic AG provides a modern web application for communication purposes between personnel and planning unit.

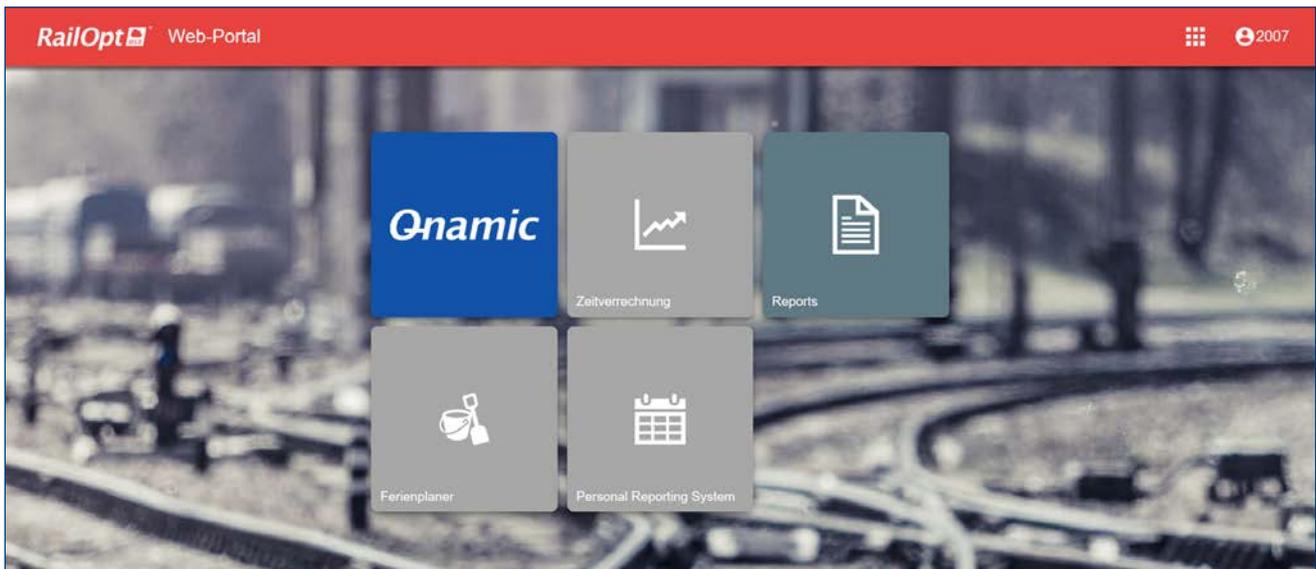

RailOpt® WEB allows for the efficient and modern online administration of personnel related data closely linked to RailOpt®.

With its user-friendly and well laid out interface RailOpt® WEB guides you through every request step thanks to its clearly structured navigation. It provides for personnel an easy to read display of all past and future on-duty data and settings

as well as a transparent overview of the vacation and free time account. On the planning and dispatch level the integration of RailOpt® WEB makes for a smooth and reliable workflow within the planning management of RailOpt®.

RailOpt® WEB is a web application that requires no further software installation by the user and runs on all mobile devices. Data transfer and access is carried out via internet allowing for the information to be retrieved, completed or transmitted from everywhere via web browser. Modifications of the application can easily and economically be made through a central web server.

RailOpt® WEB provides the user with the following features for the administration of personnel related data.

Work Time Calculation

This tool enables personnel to view in detail all hours worked in the personnel reporting system. The time account thus offers integrated administration of accumulators and time calculation.

Reports

With the *RailOpt® WEB* reporting tool employees can get a quick and easy summary of their working hours.

Vacation Planner

This tool facilitates the whole vacation planning process. It also allows for the use and configuration of various evaluation and approval systems for the allocation of vacation time.

Personal Reporting System

The Personal Reporting System gives direct access to the personnel allocation plan generated with *RailOpt®*. Employees can transmit delays or changes in shift plans directly to the dispatcher. They can also place personal allocation and absence requests. These are transferred to the planner and can automatically be processed for human resource management or be declined by the planner.

Qnamic supplies software and know-how for an intelligent resource management

Qnamic AG was founded in 2003 and is based in Hägendorf (CH). We develop software solutions for resource planning and allocation for railway, supply and other service companies. Through the integration of all participants our intelligent software solutions allow for the efficient planning, dispatch and controlling of resources.

Qnamic AG stands for

- functionality, usability and stability
- parametrization and configurability
- fast implementation (time to productivity)
- 24 h support service
- usability of technical information and online services (cloud/data migration)

Our software is an adaptable system combining work time regulations, qualifications, suitability etc. supplying economical aspects for controlling purposes in realtime.

Besides providing our software tools we can also take care of operations ensuring smooth running and availability. We are equally glad to support you during implementation. We also accompany the analysis and realisation of process optimizations. Along with the software administration we make longterm commitments and even take over planning and dispatching tasks.
